

SESSION 10

1. Create playlists table

This Mini Project uses a Spotify-style playlists table. The foreign key assumes a Users(user_id) table already exists.

```
CREATE TABLE playlists (
  playlist_id INT PRIMARY KEY AUTO_INCREMENT, user_id INT NOT NULL,
  name VARCHAR(100) NOT NULL, created_at DATETIME NOT NULL DEFAULT CURRENT_TIMESTAMP,
  FOREIGN KEY (user_id) REFERENCES Users(user_id)
);
```

2. Insert records

Each row has realistic playlist data.

```
INSERT INTO playlists (user_id,name,created_at) VALUES
(1,'Workout Mix','2026-07-01 08:00:00'),
(1,'Chill Vibes','2026-07-05 19:30:00'),
(2,'Top Hits','2026-07-10 12:15:00');
```

3. Rename Chill Vibes

The WHERE clause identifies both the user and playlist name.

```
UPDATE playlists SET name='Evening Chill'
WHERE user_id=1 AND name='Chill Vibes';
```

4. Delete Workout Mix safely

A SELECT preview is shown before DELETE.

```
SELECT * FROM playlists WHERE user_id=1 AND name='Workout Mix';
DELETE FROM playlists WHERE user_id=1 AND name='Workout Mix';
```

5. Monthly stored procedure

The procedure counts playlists for a specific user and month. Call it with a user ID and month number.

```
DELIMITER //
CREATE PROCEDURE GetMonthlyPlaylistCount(IN p_user_id INT,IN p_month INT)
BEGIN
  SELECT COUNT(*) AS playlist_count FROM playlists
  WHERE user_id=p_user_id AND MONTH(created_at)=p_month;
END//
DELIMITER ;
CALL GetMonthlyPlaylistCount(1,7);
```
