

SESSION 2

1. Create restaurants table

CREATE is a DDL command: it defines database objects. DECIMAL(2,1) stores one digit after the decimal, suitable for ratings such as 4.5.

```
CREATE TABLE restaurants (  
  id INT PRIMARY KEY AUTO_INCREMENT,  
  name VARCHAR(100) NOT NULL,  
  location VARCHAR(100) NOT NULL,  
  rating DECIMAL(2,1)  
);
```

2. ALTER TABLE

ALTER changes an existing table. Always inspect a table before changing production data.

```
ALTER TABLE restaurants ADD COLUMN average_cost INT;  
DESCRIBE restaurants;
```

3. DROP TABLE

DROP permanently removes the table and its data. Use it only for the practice table after verifying its name.

```
DROP TABLE restaurants;
```

4. Create playlists table

This table represents playlists in a Spotify-style app.

```
CREATE TABLE playlists (  
  playlist_id INT PRIMARY KEY AUTO_INCREMENT,  
  title VARCHAR(50) NOT NULL,  
  created_by VARCHAR(50) NOT NULL,  
  created_at DATE NOT NULL  
);
```
