

SESSION 5

1. Create related tables and data

The foreign key links each post to the influencer who created it. Insert one influencer without posts to demonstrate LEFT JOIN.

```
CREATE TABLE influencers (influencer_id INT PRIMARY KEY, name VARCHAR(100));
CREATE TABLE posts (post_id INT PRIMARY KEY, influencer_id INT, caption VARCHAR(255), FOREIGN KEY (influencer_id) REFERENCES influencers (influencer_id));
INSERT INTO influencers VALUES (1, 'Riya'), (2, 'Aarav'), (3, 'Maya');
INSERT INTO posts VALUES (101, 1, 'Morning coffee'), (102, 1, 'Travel diary'), (103, 2, 'New recipe'), (104, 2, 'Weekend vibes');
```

2. INNER JOIN

INNER JOIN returns only rows that have a match in both tables.

```
SELECT p.caption, i.name
FROM posts p INNER JOIN influencers i
ON p.influencer_id=i.influencer_id;
```

3. LEFT JOIN with no-post text

LEFT JOIN preserves every influencer. COALESCE replaces NULL captions.

```
SELECT i.name, COALESCE(p.caption, 'No Posts') AS caption
FROM influencers i LEFT JOIN posts p
ON i.influencer_id=p.influencer_id;
```

4. RIGHT JOIN

RIGHT JOIN preserves all posts, including any unmatched influencer_id.

```
SELECT p.caption, i.name
FROM influencers i RIGHT JOIN posts p
ON i.influencer_id=p.influencer_id;
```
